Did you know that when you powered-up your computer for the very first time (right after you tore off the plastic wrapper) it started losing processing speed? And have you also noticed it's been running slower... and slower... ever since?

[Insert as Sidebar]
"My laptop started losing its "like new" speed within a week or two of getting it, and got increasingly slow to open programs, manipulate graphics, etc. The laptop is now as fast and snappy as the day I took it out of the box! Very pleased with PC Speed Scan Pro!"

-- Bob Wright, Portland, Maine

Defragging it will help... a little. And uninstalling old or unused programs... usually makes it a lot worse!

The Culprit is Your *Registry*!

The Registry is where your PC's operating system keeps all those important program files that run your computer's software and hardware.

And every time you load a new program, or uninstall one, connect a new piece of hardware, upgrade drivers—even browse the internet—your registry is being assaulted.

"Because of PC Speed Scan Pro, my computer isn't freezing up anymore, and it's running quite a bit faster than it was!"

--Mark A. Scott, Wichita, KS

In fact, nearly everything you do on your computer affects your registry! And, over time your registry files wear out, become corrupt—creating errors—causing your computer to eventually freeze, crash, limp and sputter—while you sit there waiting *forever* for something to move on your screen!

That's why you must go inside your Registry (because it'll only get worse) and clean house. But, unless you're a real IT whiz with a registry editor...

DON'T DO IT!!

People have gotten lost inside their Registry—never to be heard from again (far worse, after tinkering around in there, their computer never worked again!)

That's why we created **PC Speed Scan Pro...**

So you don't go in there alone—in fact, you don't go in there at all!

"My computer was getting slower and slower, when I used PC Speed Scan Pro my computer works better than ever."

--Amy Kinneberg, Coachella, CA

PC Speed Scan Pro is a fast and easy to use software program the dives right into your computer's registry, locates all the corrupted, problem causing files—and

automatically removes them—returning your computer to it's original, pristine and speedy state.

And it's customizable, too! You can let it run automatically (the easiest and quickest option). Or, join the hunt and kill, if you're up to it (directing it to find the specific types of registry errors you want removed).

100% Blazing Speed Risk-FREE Guarantee
Your PC will run as fast as the day you bought it—or your money back!
