

**"Why I'm Recommending You Immediately Switch From Accel to *NEW Super-Formula Accel*—now with powerful Vitamin E-based *Tocotrienols*."**

**-- Dr. Al Sears, MD**

---

**"Discover why I'm taking my patients off Accel and immediately switching them to *NEW Super-Formula Accel*, now with artery-cleaning, cholesterol-fighting *Tocotrienols*."**

**-- Dr. Al Sears, MD**

---

**"Switch immediately from Accel to *NEW Super-Formula Accel* now with arterial plaque and serum cholesterol-fighting *Tocotrienols*."**

**-- Dr. Al Sears, MD.**

Dear Health Conscious Reader,

Many of my patients ask why I'm recommending they switch from Accel to new Super-Formula Accel.

The cost is the same, and the major active ingredient—ubiquinol, nature's most concentrated and easily absorbable form of CoQ10—is the same.

And Accel works!

It provides antioxidant power and life-sustaining fuel to every cell in your body.

So why switch?

The answer is simple and straightforward: the ubiquinol in new Super-Formula Accel, thanks to the addition of vitamin E-based tocotrienols, stays longer in your system and at significantly higher levels.

And aside from increased health benefits, it also saves you money!

Let me explain...

Because Super Accel is stronger, and more potent, it substantially increases your body's ability to fight off age-related illnesses and ailments.

By delivering essential antioxidant power and energy to your body over a longer period of time—and at a higher level—your heart, your liver, indeed every tissue and cell in your body is better protected.

As reported by recent medical studies, tocotrienols combine synergistically with CoQ10—effectively increasing the levels of ubiquinol absorbed and retained by your body.

This means you can take less CoQ10, and that saves you money.

And yet...

**No One Thought Natural Ubiquinol—Accel's Primary ingredient—  
Could Actually be Strengthened!**

If you remember when I first introduced Accel, a couple years back, hardly anyone had heard of ubiquinol, the most reduced form of CoQ10.

Up until then, almost everyone, doctors included, thought ubiquinone, the nutrient that constitutes CoQ10, was the only form of CoQ10 anyone needed to remain heart healthy, energized and protected from a host of debilitating age-related sicknesses.

But I suspected there was more to the story—something unsettling—something yet to be uncovered.

I immediately began my research into what could be ubiquinone's Achilles' heel—it's weakness or limitation.

And I quickly discovered that for millions of Americans, age 30 and above, CoQ10, in the form of ubiquinone, was not getting completely absorbed—it wasn't passing through the outer membrane walls of the heart, liver, brain and other organs.

It was not entering the cells of our bodies—and more specifically, into the *mitochondria*—the engine inside every human cell, which stores our DNA, converts food into energy—and keeps us alive.

And the reason was clear...

As you age your body's ability to chemically process ubiquinone into its 100% absorbable form, ubiquinol, is impaired. It's purely a natural and unavoidable consequence of the aging process.

Nevertheless, the result is that CoQ10, one of your body's most needed nutrients—the fuel that powers the trillions of *mitochondria* in your body—is neither delivered nor utilized in sufficient quantities to have any significant beneficial effect if you're over the age of 30.

### **It's Pure Age-Discrimination!**

Yet, thousands if not millions of people over the age of 30 were still purchasing CoQ10 in its most generic form, ubiquinone—essentially throwing away their money—and literally feeling no better for having done so.

But the importance of CoQ10 and your need for it could not be ignored or avoided.

Without sufficient amounts of CoQ10 in your system the aging process accelerates—**and the effects are visible.**

Your skin looks older.

Your vision decreases.

Your breathing becomes labored.

You gain weight.

You become easily fatigued.

You may develop physical tremors and lose your balance.

You run to the bathroom more often.

Your gums bleed.

You suffer memory loss and become easily confused, unable to think clearly.

The list goes on and on.

So even though CoQ10 was hailed in the media as a fountain of youth—a clinically tested way to stay younger, healthier and energized—the promise could not be fulfilled if you were over the age of 30.

Your body could not fully process the ubiquinone.

### **Then Providence Stepped Into My Office...**

In the form of world renowned CoQ10 research scientist Dr. Tatsumasa Mae, who had developed a process by which ubiquinone could finally be reduced to its ingestible and immediately absorbable form—ubiquinol.

And Accel was born.

With Accel everyone, no matter their age, could finally receive the benefits that previously only a 20-year-old might know—energy, vitality, and a powerful, ever vigilant immune system that could help fight off inflammations and infections that afflict the heart, the brain, the liver, kidneys, lungs—practically every vital organ in your body.

But there was a problem.

Not with its effectiveness. Accel works. And I have absolutely no doubt that every patient of mine who takes it will attest to that fact.

Indeed, before I developed Accel you would've had to endlessly swallow 400 mg of ubiquinone every eight hours to absorb what Accel provides to you in just one 50 mg capsule taken just once a day!

**That's more than an 800% increase in overall delivered effectiveness—thanks to Accel.**

### **But Here's the Problem...**

Though Accel delivers more CoQ10, via ubiquinol, to your heart and other vital organs—I knew there had to be a way to make it stay active in your system even longer.

Other doctors and scientists may have thought Accel couldn't be improved, that ubiquinol was all there was—the end all and be all of life-sustaining cellular fuel.

But I was far from convinced. I wasn't content to sit back and leave well enough alone.

After all, it was once thought the world was flat... that man could never fly... that the sound barrier could never be broken... that no one could run faster than a three minute mile... that a personal computer was a fantasy.

And yet, I will not deny that Accel is one of the most important nutritional supplements anyone can take to help fight of age-related illnesses—and thereby live a longer and healthier life.

Indeed, that you and I need the ubiquinol in Accel is not in dispute.

It's why your body produces CoQ10 in the first place. Your liver actually manufactures CoQ10—but, unfortunately, in ever-declining amounts as we age.

That's exactly why CoQ10 is given to patients suffering from congestive heart failure, to help strengthen their weakened hearts.

Indeed, it's a medical fact that people with congestive heart failure actually have significantly lower levels of CoQ10 in their system—resulting in poor circulation and shortness of breath.

CoQ10 is also given to patients who suffer from neurological illnesses, physical instability and tremors, kidney failure, high blood sugar, high blood pressure—indeed double blind study after double blind study shows that supplementing with CoQ10 improves blood pressure and reduces episodes of arrhythmia, irregular heartbeats.<sup>1</sup>

CoQ10 has also helped patients with poor vision and inflammations of the gum, and has even helped patients who suffer from migraine headaches.

For men, CoQ10 improves the quality of their sperm.

Athletes even take it to improve their performance!

And yet, even though Accel stays active in your system longer than ubiquinone, if you're older than 30—I believed there had to be a way to make ubiquinol even more powerful—so that it'll stay in your body even longer and at higher levels.

**Your Body's Free-Radical Production Helped Me Find the Answer**

Free-radicals are the corrosive and destructive by-products of expended energy—the chemical end-result of oxygen burning within every cell of your body.

If oxygen feeds the fire of life within your body—then free-radicals are the ashes that are left behind.

Everything you and I do from eating and breathing to walking and driving a car—causes oxygen to be burned in your cells, and for free-radicals to subsequently be formed and circulated within your system.

Free-radicals cause you to age. They cause your organs, your heart, lungs, and brain, to wither—to be drained of strength and vitality.

Free-radicals also weaken your immune system—making you susceptible to all kinds of illnesses.

Free-radicals even cause your skin to wrinkle and sag, your vision to deteriorate, and every muscle in your body to atrophy.

Antioxidants on the other hand rid your body of free-radicals.

How convenient therefore that Accel, along with everything else that it is, is also a powerful antioxidant!

And so right there I knew what I needed to dramatically extend the beneficial life of Accel was a supportive and complementary antioxidant—and I found it!

Like milk and cookies...

### **Tocotrienols and Accel Were Made for Each Other**

You've no doubt heard me talk many times about the health benefits of natural vitamin E.

Its powerful antioxidant properties help protect the cells in your body from free-radical damage.

But, up until recently medical science believed its amazing antioxidant power was derived predominantly from *tocopherols*, one of its two main active ingredients.

*Tocotrienols*, the other active ingredient was dismissed as being inconsequential.

Fortunately, we now know better.

Research has shown that when tocotrienols are carefully isolated and removed from the vitamin E compound, *they are 40-60 times stronger than vitamin E alone* in stopping oxidative damage to your cells and internal organs.

Tocotrienols are without a doubt one of the most formidable and superior natural antioxidants available.

They can help reduce the incidence of cancerous tumors, heart attacks and prevent strokes caused by hardening of the carotid artery that pumps blood to the brain.

And, tocotrienols are extremely effective at helping you reduce your bad cholesterol (LDL) and increase your good cholesterol (HDL) while maintaining healthy triglyceride levels.

How interesting then that if you're taking "statin drugs" to reduce your cholesterol—which has the unfortunate and documented side-effect of dramatically reducing the level of CoQ10 in your system...

Super-Formula Accel with tocotrienols could very well be your solution to reducing your cholesterol, while increasing your levels of CoQ10—all with absolutely zero side-effects!

And that's still not all.

### **Then it was Discovered...**

Tocotrienols and Accel are even more potent when combined than when taken separately.

As reported in ***The Journal of The American Society for Nutritional Sciences*** the absorption of ubiquinol and tocotrienols are significantly increased when the two are taken together.

In other words, my goal of strengthening Accel—of extending its useful life—of increasing not only the amount of ubiquinol that enters your system, but also the level of ubiquinol that stays working in your system longer—

protecting your heart, brain and other vital organs—is now possible thanks to the addition of tocotrienols.

Not only that...

When the tocotrienols are combined with ubiquinol, they're also strengthened, too—allowing even more of this revitalizing, health-sustaining antioxidant to be absorbed and retained by your body!

It's a classic case of nutritional synergy—wherein the whole is greater than the sum of the parts! Two nutrients enhancing and magnifying the benefits of each other!

And if that wasn't enough... there's another extra-added health benefit...

It was reported by the Department of Biochemistry and Biophysics at Stockholm University in Sweden that when tocotrienols and ubiquinol are combined serum cholesterol creation *declines by 50-90%*.

The benefits to your heart of reduced levels of artery-clogging cholesterol simply cannot be understated, much less ignored. Quite simply, it could mean your susceptibility to heart attacks and strokes will be significantly decreased.

### **Now You Know Why...**

I added tocotrienols to Accel—why I created Super-Formula Accel:

So that every one of the above-mentioned health benefits of a combined ubiquinol and tocotrienol formula can be delivered directly to you in just one small yet powerful XX mg capsule.

And, even though new Super-Formula Accel is far more potent—offering you longer-lasting and higher levels of immune system boosting, heart and brain strengthening ubiquinol, thanks to the addition of tocotrienols—with all the cancer, high blood pressure and cholesterol fighting benefits that they provide...

The price of Super-Formula Accel—is exactly the same as old formula Accel!

Why spend more money—possibly twice the amount of money—to buy Accel and tocotrienols separately—when you can get both for just the price of Accel?

## Save Money with New Super-Formula Accel

Today, if you order new Super-Formula Accel by [clicking here](#) right now, I'll give you the exact same discounts I offered you with old-formula Accel:

The Preferred Discount: You'll receive a full half-year's supply of Super-Formula Accel for just \$167.82—that's a savings of \$82.86 off the regular 6-month price. Plus, I'll ship you your supply of Super-Formula Accel for FREE! [Order now!](#)

The Good-Choice Discount: You'll receive a three-month supply of Super-Formula Accel for just \$95.88—an immediate savings of \$31.92, and you still won't pay for shipping and handling! [Order now!](#)

The 1<sup>st</sup> Time Trial Discount: You'll receive a one-month supply of Super-Formula Accel for only \$39.95, plus \$6.95 for shipping and handling. [Order now!](#)

And yet, whichever discount you choose, you'll still receive my risk-FREE Health Improvement Guarantee:

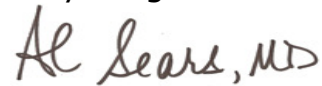

If you don't feel as if your health has dramatically improved—if you don't feel stronger and more energetic—if you don't feel and act younger while taking new Super-Formula Accel, just return your unused portion and I will promptly return every penny of your money with no questions asked.

Why waste your money on CoQ10 supplements that don't have the power and strength of new Super-Formula Accel with tocotrienols.

Order new Super-Formula Accel today and start defending your heart, lungs, brain, liver, kidneys, brain—indeed, every organ and cell in your body—from the ravages of free-radical damage and age-related illnesses.

Feel the energy return to your body. Feel the strength in your limbs. [Click here](#) to order Super-Formula Accel right now.

To your good health, always!

Al Sears, M.D.

P.S. Remember, New Super-Formula Accel—now with the added power of artery-cleaning, cholesterol-reducing vitamin E-based tocotrienols—is yours

for the same low price as old-formula Accel! Don't wait! [Click here](#) to order your supply of NEW Super-Formula Accel right now!
