

WARNING:

Junk files are clogging your computer's arteries!

Don't worry we won't take over your computer.
PC Scan & Sweep just wants to show you how badly junk files
are robbing your computer of both speed and performance.

Junk files are the computer equivalent of bad cholesterol—they clog your computer's arteries, making it hard for it to breathe (transfer data, etc.) and maintain computing speed.

[Use *PC Scan & Sweep* to instantly rid your computer of junk files](#)

All these junk files must be deleted immediately

Computers accumulate junk files—there's no way of stopping it. Every time you install or uninstall a program, shut down your computer improperly, or exit a program abruptly your computer accumulates junk files.

In technical terms, junk files are abandoned system files, temp files, registry keys, abandoned shortcuts and broken links.

“It's amazing what 'Scan & Sweep' finds lurking on the hard drive!”

-- R. Paschak, Fredonia, NY

“I do not have to manually delete cookies, temp files and history anymore. Also, it helps with the " little errors" that arise from other people jumping around from site to site without closing out the sites that they are not using anymore. I do not find the need to go in and clean my computer or compress files as much as I did before. Thank you.”

-- S. Ptak, Westmoreland, NY

"PC Scan & Sweep has increased my computer's over-all performance by eliminating useless junk files."

-- John Miller, Montgomery County, Missouri

[End Sidebar]

Poorly-written software programs are the worst offenders

They slow your computer to a crawl by inserting useless files into your computer's registry—and *your computer must access your registry dozens of times every second just to keep running.*

Imagine how much faster your computer will run if it didn't waste precious time reading useless registry files thousands of times a day!

[Use **PC Scan & Sweep** to instantly rid your computer of junk files](#)

Junk files hijack empty storage space on your hard drive

Junk files also duplicate and install themselves on your hard drive—robbing you of valuable storage space—which taxes your computer system, wearing it down.

SECURITY ALERT!

Junk files are also used by hackers to access private, valuable information stored on your computer.

More proof your computer is overloaded with junk files

Ever click on a program, and it won't open? Ever have your computer suddenly freeze? If you answered yes to either question, your computer is infested with junk files.

[Use **PC Scan & Sweep** to instantly rid your computer of junk files](#)

With just one click, **PC Scan & Sweep** performs a deep scan of your computer to reveal *and* remove all junk files clogging your registry, hard drive, and file system.

Plus, it removes all internet temp files, which exposes your personal information to computer hackers.

PC Scan & Sweep is recommended for Windows Vista, XP, ME, 98, and 2000

- Removes harmful junk files.
- Increases your PC speed and performance.
- Erases useless files from your Windows Registry.
- Empties all temp files to protect your personal information.
